## November 2005

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published\_Applications\_New databases: older published applications make up the Published\_Applications\_Main databases.

Searches run against Nucleic Acid Published\_Applications produce two sets of results, with the extensions .rnpbm (Published\_Applications\_NA\_New).

Searches run against Amino Acid Published\_Applications produce two sets of results, with the extensions .rapbm (Published\_Applications\_AA\_New).

rapbm (Published\_Applications\_AA\_New).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BAC clone F16B3 is from Arabidopsis chromosome III and is near the molecular marker mi74. The orientation of the sequence is from SP6 to T7 end of the BAC clone

Genes were identified by a combination of three methods: Gene prediction programs including GRAIL (available by anonymous ftp from arthur.epm.ornl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.edu/~chris/GENSCANW.html), and NetPlantGene

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the cranslation initiation start (ATG). A sequence are derived from the Ws or LAAR ecotypes and therefore may contain polymorphisms when compared to sequences from Col-0. Genset carried out the library production and sequences from Col-0. Genset carried out the library production and sequences from five full-length clones. Ceres, Inc. carried out the clustering of the full-length clones. Selection of clones, and sequence assembly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     /protein id="Aam6060.1"

Submitted (16-58P-2004) Motoaki Seki, RIKEN Genomic Sciences Submitted (16-58P-2004) Motoaki Seki, RIKEN Genomic Sciences Center; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa 230-0045, Japan (E-mail:mseki@gsc.riken.jp, Yokohama, Kanagawa 145-503-958) Muklihttp://rarge.gsc.riken.jp/, Tel:81-45-503-9625, Pax:81-45-503-9586) An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al. (1998) Plant J. 15:707-720; Seki et al. (2002) Science 296:141-145). cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1-E vector (Carninci et al. (2001) Genomics 77:79-90) digested with BamHI and SalI. This clone is in a modified pluescript vector.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                900
                                                                                                                                                                                                                                                                              and encoding polymuclectides that impart at least one dwf7 mutant phenotype when expressed in a plant. The polymucleotide sequences conciding the mutant dwf7 proteins are useful for producing transgenic plants from transformed plant calls. The polymucleotide sequences are useful for altering the sterol composition of a plant relative to the wild-type plant. The transgenic plant has less cholesterol or increased atealor production relative to the wild-type plant. The mutant sequences are also useful for isolating or creating other mutant call gene alleles and for detecting plant regulatory defects which can affect plant growth. The present sequence encodes Arabidopsis thaliana dwf7 homologue protein,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                   present invention relates to the isolation of dwarf7 (dwf7) mutants
                                                                                                                                                 Novel isolated dwf7 polynucleotide for altering sterol composition of a plant, by introducing polynucleotide into plant cell to produce transformed plant cell and producing transgenic plant from transformed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TITICAGITIGITICITCTICITIAGITCTIGIAAAAAGAITGGGAGCAITIAGITCTITCTACCAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          studying the biosynthesis of brassinosteroids. The dwf7 control elemt is useful as a plant promoter to express any protein of interest in a transgenic plant, particularly to express a protein involved in brassinosteroid biosynthesis. The DWF7 polypeptide is useful in any biochemical applications, e.g., regulation of sterol synthesis, modification of elongation of plant structures and experimental or industrial biochemical applications. This sequence represents DNA encoding an Arabidopsis DWF7/STBI polypeptide homologue, used in the scope of the invention.

The present invention relates to the isolation of dwarf? (dwf?) mutants and encoding polymucleotides that impart at least one dwf? mutant phenotype when expressed in a plant. The polymucleotide sequences encoding the mutant dwf? proteins are useful for producing transgenic plants from transformed plant cells. The polymucleotide sequences are useful for altering the sterol composition of a plant relative to the wild-type plant. The transgenic plant has less cholesterol or increased sterol production relative to the wild-type plant. The mutant sequences are also useful for isolating or creating other mutant cell gene alleles, and for detecting plant requiatory defects which can affect plant growth. The present sequence encodes Arabidopsis thaliana dwf? protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated dwf7 polynucleotide for altering sterol composition of a plant, by introducing polynucleotide into plant cell to produce transformed plant cell and producing transgenic plant from transformed

The invention relates to an isolated dwarf7 (dwf7) polynucleotide that imparts at least one dwf7 mutant phenotype when expressed in a plant. The invention also relates to a recombinant vector comprising the dwf7 polynucleotide and control elements that are operably linked to the polynucleotide and control elements that are operably linked to the colon polynucleotide and control elements is netrologous to the coding sequence, a nost call transformed with the recombinant vector above, a method of producing a transgenic plant comprising the polynucleotide, a cransgenic plant comprising the polynucleotide, a polynucleotide at a transgenic plant relative to the wild-type plant. The dwf7 polynucleotides and polypeptides are useful for producing transgenic plants have altered structure or morphology. The transgenic plants are useful in plant breeding, in agricultural production or in industrial applications. The dwf7 polynucleotides are useful for resoluting other mutant alleles and for enhancing certain features such a supplications. The dwf7 polynucleotides are useful for conferring and increased seed production. They are also useful for conferring desired creating other mutant alleles and for enhancing certain features such a increased seed production. They are also useful for conferring desired craits on any plant, for altering sterol composition of a plant thus conferring the biosynthesis of brassinosteroids. The dwf7 control element is useful as a plant promoter to express any protein of interest in a transgenic plant, particularly to express a protein involved in cransgenic plant, particularly to express a protein involved in brassinosteroid biosynthesis. The DWF7 polypeptide is useful in any confidention of plant structures and experimental or industrial applications, e.g., regulation of sequence represents thale cress confidential applications of plant structures and experimental confidential plant has a plant thus expensed by a protein of plant element confidential elements. This sequence represents thale cr
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated dwarf 7 (dwf?) polynucleotide, useful for conferring desired traits on essentially any plant and for altering sterol composition of a plant thus increasing or reducing cholesterol content.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 CCATGCCACCCATCATATCTACAAGCAGAATACACTCTCTCCCATTTGCCGGTAAGTG 120

```
The invention describes a plant (I) comprising DNA encoding a polypeptide (PI) with 3-hydroxy-3-methylglutaryl-Coenzyme A reductase enzyme activity and a polypeptide (P2) with steroid pathway enzyme activity such as gualene epoxidase, sterol methyl transferase I, sterol C4-demethylase, btusifoliol C14alpha-demethylase, sterol C5-desaturase or sterol methyl transferase I in naryme activity, in its genome. A recombinant vector transferase II naryme activity, in its genome. A recombinant vector repressing P1 is useful for increasing the formation of steroid pathway products in a transformed host cell as compared to an otherwise identical north a vector expressing P1 or P2 (III), or a transgenic plant produced with a vector expressing P1 or P2 (III), or a transformed by secondinant vector (II) is useful for producing a plant by sexually crossing (I), (II) or (III) with a non-transformed plant. A cholesterol lowering composition (IV) containing (V), and a pharmaceutical pathway product (V), a food product containing (V), and a pharmaceutical composition containing (V) is useful for lowering the plasma
                                                                                               1001

concentration of low density lipoprotein cholesterol or for treating or preventing an elevated plasma concentration of low density lipoprotein cholesterol. (1), or a transgenic plant is useful for making a food additive composition by obtaining oil containing a steroid pathway product from seed of (1), or a transgenic plant and mixing the oil with an edible solublising agent, a dispersant, and optionally an antioxidant. (V) is useful for reducing the concentration of low density lipoprotein cholesterol in plasma. (1) has improved nutritional characteristics. This sequence represents an Arabidopsis thaliana sterol C5-desaturase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to novel isolated polynucleotide encoding sterol metabolism enzyme. The nucleotide sequence of the invention is useful for transforming a cell by introducing the sequence into a cell. The sequences may also be useful for producing a transgenic plant, by transgenic plant from the transforming a plant cell with the cDNA sequence and regenerating a transgenic plant from the transformed plant cell. The nucleotide sequence is useful for obtaining a nucleic acid fragment encoding all or a substantial portion of the amino acid sequence encoding a sterol delta-7 reductase or a sterol-C5 desaturase polypeptide. Probes derived from the nucleotide sequence of the invention may be useful for physical mapping. The present sequence represents a cDNA sequence encoding a sterol metabolism enzyme of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2501
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2561
                                                                                                                                                                                                                                                                                                                                                          The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arepresentative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office

                                                                                                           New polynucleotide encoding a transcription factor polypeptide, useful in genetic mapping for plant breeding.
                                                                                                                                                                                         The invention relates to a polynucleotide which encodes a transcription factor. The nucleic acid fragment is useful in genetic mapping for plant breeding. The present sequence is sterol-C5-desaturase cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        556 GCTTTACAAATATCTTCATGCTACCCATCACATCTACAATAAAACAGAACACTCTCTCCCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a polynucleotide (or its complement, protein encoding fragment or reverse complement), comprising a nucleotide encoding a polypeptide comprising an authoridise and sequence convoluted in or associated with the biosynthesis of isoprenoids in a plant, an expression cassette comprising the polympetide, a host cell comprising the polympetide and transgenic plant comprising the expression cassette. The polypeptide and polymucleotide, a host cell comprising the expression cassette. The polypeptides and polymucleotides include those associated with the biosynthesis of isopentenyl diphosphate (IPP) and dimethylallyl alcohol (DMAPP), the biosynthesis of short-chain plastid alcohol (DMAPP), the biosynthesis of short-chain plastid carotenoids and/or abscisic acids, the biosynthesis of tocopherols, plastoquinone and/or phyloquinone biosynthesis of tocopherols, plastoquinone and/or phyloquinone biosynthesis of ubiquinone, biosynthesis of ubiquinone, biosynthesis of ubiquinone, biosynthesis of ubiquinone, biosynthesis of chlorophyll or haeme. Also disclosed are banana, wheat and corn homologues of some of the rice polymucleotides. The corn homologues of some of the rice polymucleotides are useful for producing transgenic plants, where the genome is augmented by a nucleic acid molecule of the invention, or in which the corresponding gene has been disrupted, e.g. to result in a loss, a decrease or an alteration in the function of the product encoded by the gene. The plants may also have increased yields and/or produce a better quality product than the corresponding wild-type plant. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotides and polypeptides associated with isoprenoid synthesis in plants, useful for producing transgenic plants, for targeted gene disruption, as well as markers or probes.

```
The invention relates to a polymucleotide (or its complement, protein encoding fragment or reverse complement), comprising a nucleotide encoding a polypeptide comprising a maino acid sequence encoding a polypeptide comprising an amino acid sequence involved in or associated with the biosynthesis of isoprenoids in a plant, an expression cassette comprising the polymucleotide, a host cell comprising the cassette comprising the polypeptides and polymorleotide, a host cell comprising the cassette. The polypeptides and polymucleotide include those associated with the biosynthesis of isopententyl diphosphate (IPP) and dimethylallyl alcohol (DWAPP), the biosynthesis of short-chain plastid presylutransferases, the biosynthesis of gibberallins, the biosynthesis of presylutransferases, the biosynthesis of dibosynthesis of tocopherols, plastoquinone and/or abscisic acids, the biosynthesis of tocopherols, plastoquinone and/or abscisic acids, the biosynthesis of tocopherols, plastoquinone and/or phylloquinone biosynthesis of tocopherols, plastoquinone and/or phylloquinone biosynthesis of colorophyll or haeme. Also disclosed are banana, wheat and corn homologues of some of the rice polymucleotides. The plants may also materials of the rice polymucleotides. The plants may also have increased yields and/or produce a lost of the print the corresponding gene has been disrupted, e.g. to result in a loss, and alteration in the function of the product encoded by the gene. The plants may also have increased yields and/or produce and lectrase or an alteration in the function of the product encoded by the gene. The plants may also have increased yields and/or produce are useful for trageted gene disruption, as well as markers and probes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence is a wheat isopremoid biosynthesis-easeclated cDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotides and polypeptides associated with isoprenoid synthesis in plants, useful for producing transgenic plants, for targeted gene disruption, as well as markers or probes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a polynucleotide which encodes a transcription factor. The nucleic acid fragment is useful in genetic mapping for plant breeding. The present sequence is sterol-C5-desaturase CDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2082 GCCTTGGTACACTCTTCTTCCAGCTGTCTCTGAGTATATGATCGAGCATGGTTGGACCAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to novel isolated polynucleotide encoding sterol metabolism enzyme. The nucleotide sequence of the invention is useful for transforming a cell by introducing the sequence into a cell. The sequences may also be useful for producing a transgenic plant, by transforming a plant cell with the CDNA sequence and regenerating a transgenic plant from the transformed plant cell. The nucleotide sequence is useful for obtaining a nucleic acid fragment encoding all or a substantial portion of the amino acid sequence encoding a sterol delta-7 reductase or a sterol-C5 desaturase polypeptide. Probes derived from the nucleotide sequence of the invention may be useful for physical mapping. The present sequence represents a cDNA sequence encoding a sterol metabolism enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              307
